Commissioned by Sound Ideas’ Michael Morreale for the 2011 CFRC Funding Drive

Fugue on CFRC
(and 101.9)

Mark McDonald

Not too fast!
In order to incorporate "CFRC" into this fugue subject, I used the same method which Maurice Duruflé used to create his fugue on ALAIN. In this method, the letters A through H (H being B-flat in German notation) correspond to the notes of the keyboard, while the letters which follow are assigned the notes of the keyboard alphabetically. For example, where the letter A is A, C is C and G is G, so the letter I is A, K is C and O is G. This means that R would then be assigned the note B making my fugue subject on CFRC "C, F, B, C".

However, it doesn’t end there. Since I still needed to write a countersubject, I decided to turn to the post-tonal theory of the 20th century to write my countersubject on the numbers 101.9 (the FM frequency on which CFRC broadcasts). Since post-tonal theorists regard the chromatic notes of the keyboard as numbers from 0 to 11 (C being 0, C-sharp being 1, etc. etc.), my countersubject would have to include the notes C-sharp, C, C-sharp and G-sharp. In order to get around this, I employed a simple technique used by post-tonal composers which involved transposing my so-call "pitch-class-set" down a tritone to a more comfortable G, F-sharp G, D. This theme is then heard *almost* every time the subject enters.

There you have it; a fugue on CFRC, 101.9 FM!
